

INTEGRATED RENEWABLE ENERGY INITIATES CARBON FOOTPRINT INVENTORY AND ASSESSMENT SERVICE

December 4, 2007
For Immediate Release

SEATTLE, WA - Integrated Renewable Energy of Seattle, WA announced today that it is initiating a carbon footprint inventory and assessment service. These inventories are conducted in compliance with the Greenhouse Gas Protocol developed by the World Resources Institute and the World Business Council for Sustainable Development. The inventories are compliant with ISO 14000, and accepted by most agencies and organizations involved in greenhouse gas tracking, crediting, and regulating.

Carbon Footprint Inventory and Estimation Service quantifies a business's carbon footprint. It is the first step in targeting energy cost savings, enabling improved energy management, operational efficiencies, and increased revenues. Undertaking a carbon footprint assessment also generates a positive image amongst customers, improves shareholder relations, and facilitates employee recruitment.

Integrated Renewable Energy provides consulting services for renewable energy projects, energy efficiency efforts, and green building design. Services include feasibility assessments, cost estimating, project development, and project management.
